GENERAL INFORMATION FOR OUR BITE TYPE TUBE FITTINGS.

Hy-Lok Corp. bite type tube fittings are precision machined, under strict quality control.

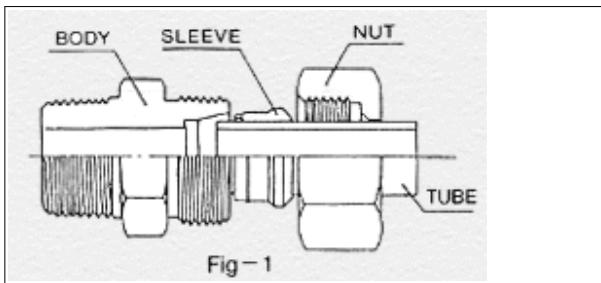

Hy-Lok Corp. bite type tube fittings are the flareless tube fitting with the visible bite.

This added safety feature makes Hy-Lok Corp. bite type the preferred fitting for non-flared tube connections.

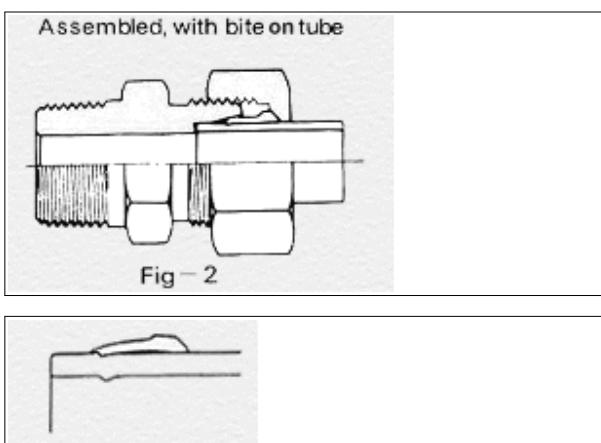

How Do They Work?

The bite type flareless hydraulic tube fitting was designed to work on medium to heavy wall tubing which was hard to flare and has three parts :

1. body, 2. sleeve, 3. nut. (As shown in Fig-1)

The sleeve is driven forward on the tube by the nut. As the sleeve moves forward it meets the seal seat angle of the body which causes the sleeve to cam inward into the tube. The sleeve then bites into the tube causing a small ridge of tube material to be pushed up in front of the biting edge of the sleeve. (As shown in Fig-2 & 3)

The make up of the fitting is critical in that the tube must be bottomed against the tube stop in the body or presetting tool during make up. If it is not bottomed the tube will move forward with the sleeve and a bite will not be achieved. Make sure the tube is bottomed.

A check is possible to see if the tube was bottomed during make up. To make this check look at the end of the tube, and notice if a circular appearing ring has been impressed into the tube end face. This impression will be caused by the tube stop which has slight reverse angle rather than a flat face.

Material Specifications

	Steel	Stainless	Brass
Forged Bodies	S20C - S48C	SUS316, 304	C3771
Barstock Bodies	S20C - S48C	SUS316, 304	C3604
Cold Formed Nuts	S10C - S20C		
Barstock Nuts	S20C - S48C	SUS316, 304	C3604
Sleeves	S10C	SUS316, 304	C3604

Applicable Pressure Rating

Our standard specifications of the fittings, which are shown in the catalog, are as below :

Fitting size (applicable Tube O.D.)	4 ~15	16 ~22	25 ~28	30 ~38	40 ~50
Rated Pressure (kgf/cm)	500	400	350	250	210
Max. working temperature (°C)				300	

The Rated Pressure for the fittings are determined based on the results of severe repetitively conducted tests and the design calculation ; precisely, the rated pressures are determined for each size of fittings while the safety factor of as much as 4 is taken into account in the design.

Suitable Tubing Materials

Common material of tubing best suited for industrial service, and in accordance with various Industry Standards and recommendations of tubing manufacturers, include :

Steel - Seamless, fully annealed, also welded and redrawn type suitable for bending. Maximum hardness, Rockwell B72.

The Applicable Tubes to the fittings entered in the catalog and which we recommend are follows :

Carbon Steel Precision Tubes for Hydraulic Line Service, JOHS-102, OST-2 (The Oil Hydraulic Association Standards) or Equivalant Refer to page 54this catalog for the comparison chart between this Standard and other Standards for easy selection.

Stainless Steel -Seamless, fully annealed, and welded redrawn, fully annealed suitable for bending Maximum hardness, Rockwell B90.

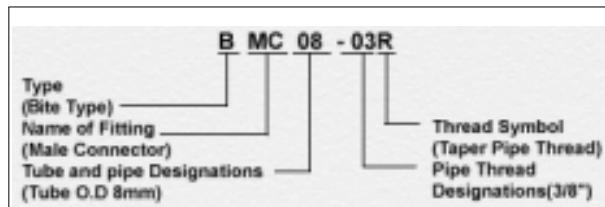

Copper - Seamless coils, soft or light annealed, maximum hardness Rockwell F55. Straight lengths, light drawn and general purpose, maximum hardness of 60 on Rockwell 30T scale.

DESIGNATION PART NUMBER SYSTEM

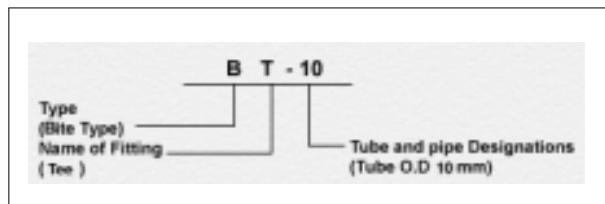

The symbols in the designation column on each page represent the shapes and sizes of individual fittings.

Part Number Example

Example : 1

Example : 2

Tube and Pipe Designation

METRIC TUBE	Out dia.	4	6	8	10.....30.....50			
	Designation	04	06	08	10.....30.....50			
SCH, PIPE	Nominal dia.	1/8	1/4	3/8	1/2	3/4	1	1-1/4
	Out dia.	10.5	13.8	17.3	21.7	27.2	34.0	42.7
	Designation	81	82	83	84	85	86	87
								88

Pipe Thread Designations

THREAD	1/8	1/4	3/8	1/2	3/4	1	1-1/4	1-1/2	2
DESIGNATION	01	02	03	04	06	08	10	12	16

Thread Symbols

R : Taper Pipe Threads (PT JIS B0203, ISO 7/1)

G : Parallel Pipe Threads (PF JIS B0202, ISO 228/1)

N : American National Standard Taper Pipe

Threads(NPT ANSI B1.20.1)

Material Indication System

Specify material by part number suffix letter :

• STEL = Carbon • S316 = 316Stainless • BRAS= Brass

Example : 1 BMC08 - 03R -STEL(Carbon Steel)

Example : 2 BT - 08 -S316(316Stainless Steel)
(S 304 :304 Stainless Steel)

Example : 3 BU - 08 -BRAS(Brass)

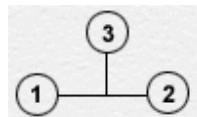

Part numbers listed are for complete fitting (body, nut and sleeve)

HOW TO ORDER

1) When placing an order with us, be sure to specify the fittings with their symbols given in the designation column on each page

Example : BMC08 - 03R STEL

2) For the fittings with different sizes

(1) represents a diameter larger than diameter(2), which is aligned with (1), and (3) is a diameter other than (1) and (2).

3) For fittings other than those mentioned in the catalog specify the following details :

- Type of fluid to be applied
- Working Pressure
- Working Temperature
- Material (Carbon Steel, Stainless Steel, Brass.)
- Shape (Union, Tee, Elbow, etc.)
- Size (Up to 50mm tube O.D. in metric or inch)
- Any other conditions in tubing

4) Gaskets mentioned in the catalog are not normally furnished for the fittings. If gaskets are required, these designation symbols shall be used to order.

5) The fitting specifications are sometimes subject to change due to continuous improvements of quality and performance.

Special Fitting

If there is any possibility of question as to the fitting desired, particularly for special fitting configurations, it is suggested that a sketch be submitted with the fitting order.

Bite Type Tube Fittings

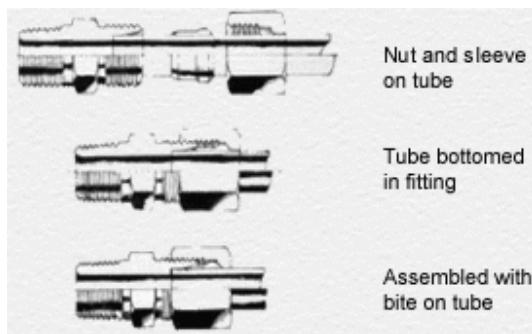

ASSEMBLY INSTRUCTIONS

Cutting The Tube

Cut tube squarely and lightly de-burr the end internally and externally.

Sleeve Placement

Slip nut and sleeve onto tubing. Be sure the long, straight end of the sleeve point toward tube end.

Lubrication

Lightly lubricate threads on tool or body as well as the tail and lead end of the sleeve with an extreme friction lubricant.

Pre-Setting

Insert tube end into tool or fitting until it bottoms against the shoulder (to hold tube motionless during pre-setting operation) and screw nut down finger tight.

Final Setting

Wrench nut down 1-1/4 turns to per-set the sleeve (Reliable make up of all flareless tube fittings is dependent upon the sleeve traveling a prescribed distance into the tapered fitting throat in order to bite into the tube and effect a positive grip and seal).

REASSEMBLE FOR FINAL INSTALLATION

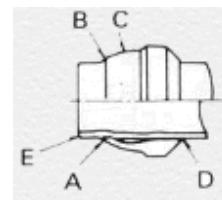

Insert the tube into the fitting body and wrench the nut down easily until a sudden increase in torque is evident. From this point turn the nut an additional 1/4 to 1/3 turn (1-1/2 to 2 wrench flats) to again spring sleeve into place to seal against the tubing and the fitting body.

INSPECTION OF BITE

All Hy-Lok Corp. bite type tube fittings must be disassembled and inspected for proper make-up before final assembly. Detailed inspection procedures are outlined below and must be followed regardless of the method used to pre-set the sleeve to the tube.

You Should Make Certain That

1. A ridge of metal has been raised above the tube surfaces, to a height of at least of the sleeve leading edge, completely around the tube (A).
2. While the leading edge of the sleeve may be coined flat (B) there is a bow to the balance of the pilot section (C).
3. The tail or back end of the sleeve is snug against the tube (D).
4. There is a slight indentation all around the end of the tube (E) that indicates the tube bottomed in the tool or fitting during pre-setting(unless evidence of this complete contact is visible the sleeve cannot be considered properly pre-set).

5. Avoid rotating the sleeve. Steel sleeve should not be capable of moving back and forth along tube, beyond the bite area (stainless steel sleeve will move than steel because of its spring back characteristics).

TROUBLE SHOOTING

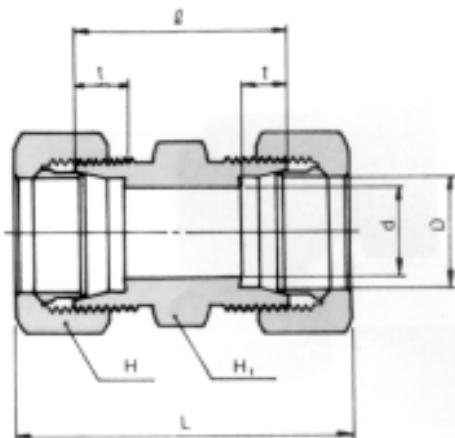

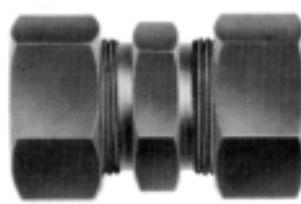

Problems with bite type hydraulic fittings are most often traced to faulty make up procedures. Look for the following:

- 1. Tube not bottomed** - check for the indentation on the tube end or compare length from end of tube to the front end of the sleeve of a known good assembly to that of the assembly in question.
- 2. Lack of bite** - Inspect for turned up ridge of material. A failure to achieve this ridge can be traced either to the fact that the nut was not tightened enough or that the tube was not bottomed against the stop which allowed the tube to travel forward with the sleeve
- 3. Sleeve cocked on tube** - The sleeve is cocked on the tube when the tube assembly is off axis with that of the body. Generally this condition is caused by faulty tube bending. All bent tube assemblies should drop into the fitting body prior to make up.
- 4. No bite** - If all of the above checks have been made and the sleeve still shows no sign of biting the tube, it may be that the tube is too hard.
